Day-19 Q-05 Substring with Concatenation of All Words

You are given a string, **s**, and a list of words, **words**, that are all of the same length. Find all starting indices of substring(s) in **s** that is a concatenation of each word in **words** exactly once and without any intervening characters.

Example 1:

Input:

```
s = "barfoothefoobarman",  
words = ["foo","bar"]
```

Output: [0,9]

Explanation: Substrings starting at index 0 and 9 are "barfoo" and "foobar" respectively.

The output order does not matter, returning [9,0] is fine too.

Example 2:

Input:

```
s = "wordgoodgoodgoodbestword",  
words = ["word","good","best","word"]
```

Output: []
