Day-08 Q-04: Symmetric Tree

Given a binary tree, check whether it is a mirror of itself (ie, symmetric around its center).

For example, this binary tree `[1, 2, 2, 3, 4, 4, 3]` is symmetric:

```
    1
   / \
  2   2
 / \ / \
3  4 4  3
```

But the following `[1, 2, 2, null, 3, null, 3]` is not:

```
    1
   / \
  2   2
   \   \
   3    3
```

Follow up: Solve it both recursively and iteratively.
