# Validating Roman Numerals

You are given a string, and you have to validate whether it's a valid Roman numeral. If it is valid, print *True*. Otherwise, print *False*. Try to create a regular expression for a valid Roman numeral.

## **Input Format**

A single line of input containing a string of Roman characters.

### **Output Format**

Output a single line containing *True* or *False* according to the instructions above.

#### **Constraints**

The number will be between 1 and 3999 (both included).

## Sample Input

# **Sample Output**

True

**CDXXI** 

#### References

Regular expressions are a key concept in any programming language. A quick explanation with Python examples is available here. You could also go through the link below to read more about regular expressions in Python.
