Re.split()

Check Tutorial tab to know how to to solve.

You are given a string s consisting only of digits 0-9 , commas , , and dots .

Your task is to complete the regex_pattern defined below, which will be used to *re.split()* all of the , and . symbols in s.

It's guaranteed that every comma and every dot in s is preceeded and followed by a digit.

Sample Input 0

```
100,000,000.000
```

Sample Output 0

```
100
000
000
000
```
