LeetCode

Day-13 Q-04: Valid Phone Numbers

Given a text file `file.txt` that contains list of phone numbers (one per line), write a one liner bash script to print all valid phone numbers.

You may assume that a valid phone number must appear in one of the following two formats: (xxx) xxx-xxxx or xxx-xxx-xxxx. (x means a digit)

You may also assume each line in the text file must not contain leading or trailing white spaces.

Example:

Assume that `file.txt` has the following content:

```
987-123-4567

123 456 7890

(123) 456-7890
```

Your script should output the following valid phone numbers:

```
987-123-4567

(123) 456-7890
```
